

FCC,

I am an XM Radio subscriber. I am willing to pay additional money to receive better service than the "free" broadcasters provide locally. We live in a "free market" society and the market demands a better alternative. If I'm willing to pay for local traffic and weather with my satellite, that is my business and the government should not shut down this competition.

The local Atlanta radio market is saturated with what I consider inferior radio services on the broadcast channels and I "choose" to pay for better. Please do not restrict XM Radio from providing this service. I pay for it and there is nothing wrong with it. Shame on the FCC and Congress if they restrict this offering. Competition is good. HR Bill 4026 is a bill supported by NAB because it protects their "on air broadcasters" and keeps them from competing and offering better services.

I strongly oppose any effort to restrict offerings by XM Radio to its subscribers.

Thank you.
